

This book describes the fundamental concepts, the latest developments and the outlook of the field of nanozymes (i.e., the catalytic nanomaterials with enzymatic characteristics). As one of today's most exciting fields, nanozyme research lies at the interface of chemistry, biology, materials science and nanotechnology. Each of the book's six chapters explores advances in nanozymes. Following an introduction to the rise of nanozymes research in the course of research on natural enzymes and artificial enzymes in Chapter 1, Chapters 2 through 5 discuss different nanomaterials used to mimic various natural enzymes, from carbon-based and metal-based nanomaterials to metal oxide-based nanomaterials and other nanomaterials. In each of these chapters, the nanomaterials enzyme mimetic activities, catalytic mechanisms and key applications are covered. In closing, Chapter 6 addresses the current challenges and outlines further directions for nanozymes. Presenting extensive information on nanozymes and supplemented with a wealth of color illustrations and tables, the book offers an ideal guide for readers from disparate areas, including analytical chemistry, materials science, nanoscience and nanotechnology, biomedical and clinical engineering, environmental science and engineering, green chemistry, and novel catalysis.

The Economic Importance of Insects, The Complete Field Guide to Stick and Leaf Insects of Australia, Kurzer Abriss einer Geschichte der Elementarmathematik: Mit Hinweisen auf die sich anschliessenden hoeheren Gebiete (German Edition), Horses to the Rescue (Barbie & Her Sisters In A Puppy Chase) (Step into Reading), The Crustacea (Treatise on Zoology - Anatomy, Taxonomy, Biology), Mathematics in Industrial Problems: Pt. 2, Optical, Infrared and Radio Astronomy: From Techniques to Observation (Unitext for Physics), Extinct and Vanishing Mammals of the Western Hemisphere, With the Marine Species of All the Oceans,
