

Fundamentals of Aquatic Ecology

Fundamentals of Aquatic Ecology is a completely up-dated and revised edition of the earlier work Fundamentals of Aquatic Ecosystems . The new edition has been re-titled to reflect the fact that the authors found that, from the modification exercise, a completely different and new book emerged. The new edition concentrates heavily of the fundamental features common to all aquatic systems, both marine and freshwater. This unique synthesis allows for the discussion of ecological processes comparatively, across environments. A general introduction is followed by discussion of various types of aquatic ecosystems - open waters, coastal zones, benthos, and the aquatic ecosystem as a whole. This is followed by an important new chapter on aquatic ecosystems and global ecology. Later chapters consider the individuals and communities in aquatic ecosystems and then habitat types which are peculiar to them. The text is divided into the following five parts: Part 1. Introduction. Part 2. Aquatic ecosystems. Part 3. Aquatic individuals and communities. Part 4. Habitat types peculiar to aquatic systems. Part 5. Human effects.
