

The 1989 Seminar on Stochastic Processes was held at the University of California at San Diego on March 30, 31 and April 1, 1989. This was the ninth in an annual series of meetings which provide researchers with the opportunity to discuss current work on stochastic processes in an informal and enjoyable atmosphere. Previous seminars were held at Princeton University, Northwestern University, the University of Florida and the University of Virginia. The seminar has grown over the years, with a total of seventy-five participants in 1989. Following the successful format of previous years, there were five invited lectures, delivered by K. L. Chung, D. Dawson, R. Durrett, N. Ikeda and T. Lyons, with the remainder of time being devoted to structured, but less formal, discussion on current work and problems. Several smaller groups also held workshop sessions on specific topics such as: super-processes, diffusion on fractals and Harnack inequalities. The participant's interest and enthusiasm created a lively and stimulating environment for the seminar. A sample of the research discussed there is contained in this volume. The 1989 Seminar was made possible by the support of the National Science Foundation, the National Security Agency and the University of California at San Diego. // We extend our thanks to them, and to the publisher Birkhauser Boston, for their support and encouragement. Finally, thanks go to Lynn Williams for her cheerful assistance with the seminar organization and production of this volume.
