

## Homing and Related Activities of Birds Volume 211

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1915 Excerpt: ...buccal area is so widened and the appendages so modified and dislocated that a maximum of water can circulate in the neighbourhood of the mouth. I suppose that the plankton is separated from the respiratory current by movements of the nets of setae on the maxillipedes, resembling the sweeping action of the legs of Cirripedes. The smallest members of the plankton only, in view of the minute size of the apparatus, would be entrapped. They would then be sucked into the stomach by pulsating movements such as Mocquard has described in other Decapoda. He has shown that the stomach functions in the manner of a pump by the alternate action of the dilator and constrictor muscles. By the expansion of the cardiac sac the partially chewed food is sucked into the stomach and on its constriction the fluid taken in is expelled, while the solids are retained, largely owing to the action of the subcesophageal valve. It will be observed that notwithstanding the simplification of structure in the stomach of Hapalocarcinus there is still left the combination of ridges and fringes of setae which occupy the posterior wall of the stomach between the cardio-pyloric valve and the cesophagus. These structures act as a filter to retain solid particles when water is expelled, but owing to the fact that these are all of small size no definite subcesophageal valve is present. The food organisms which are thus taken into the cardiac chamber are all probably small enough to pass straight through the pyloric filter and chamber into the mesenteron, where they are digested; hence their customary absence from the cardiac chamber. This organ, though far too large for the requirements, has not been reduced

in she since Hapalocarcinus acquired its present habits. The pyloric filter is preserved fo...
