Mobbing in animals is an antipredator adaptation in which individuals of prey species mob a predator. The black-headed gull is a species which aggressively engages intruding predators. The great tit, a European songbird, uses such a signal to call on nearby birds to harass the intruder. The herring gulls world: a study of the social behavior of birds. **index to titles and authors/editors of books reviewed volume - jstor** In fact, gulls have a noble history in the study of animal behavior. Listen to a Great Black-backed Gull YEW Calls learn how Great Black-backed Gull and Herring Gull communicate using Excerpts from Signals for Survival, from the Cornell Lab of Ornithology. My understanding is that most gulls mate for life. **index to titles and authors/editors of books reviewed - jstor** carnivorous animal is not wildlife he is the enemy of all (including humans and caribou), the species upon which wolves survival depend.
