

Excerpt: The material on which this volume is based, appeared in *Hardwood Record*, Chicago, in a series of articles beginning in 1905 and ending in 1913, and descriptive of the forest trees of this country. More than one hundred leading species were included in the series. They constitute the principal sources of lumber for the United States. The present volume includes all the species described in the series of articles, with a large number of less important trees added. Every region of the country is represented; no valuable tree is omitted, and the lists and descriptions are as complete as they can be made in the limited space of a single volume. The purpose held steadily in view has been to make the work practical, simple, plain, and to the point. Trees as they grow in the forest, and wood as it appears at the mill and factory, are described and discussed. Photographs and drawings of trunk and foliage are made to tell as much of the story as possible. The pictures used as illustrations are nearly all from photographs made specially for that purpose. They are a valuable contribution to tree knowledge, because they show forest forms and conditions, and are as true to nature as the camera can make them. Statistics are not given a place in these pages, for it is no part of the plan to show the product and the output of the country's mills and forests, but rather to describe the source of those products, the trees themselves.

Ice Age 2050s Certainty: Illustrated Science, Botanical Art from the Golden Age of Scientific Discovery, Electrochemical Dictionary, Living Autobiographically: How We Create Identity in Narrative, Mechanisms in Bioenergetics, Ornithology, Thirty second 32nd Annual Report of the Forestry Commissioners Year ending September 30th 1951, Purification of Laboratory Chemicals, Third Edition, Logarithmic, Trigonometric, and Other Mathematical Tables, First Color Book (First Books),
