

The Climate Change Science Program (CCSP) and its predecessor U.S. Global Change Research Program have sponsored climate research and observations for nearly 15 years, yet the overall progress of the program has not been measured systematically. Metrics—a system of measurement that includes the item being measured, the unit of measurement, and the value of the unit—offer a tool for measuring such progress; improving program performance; and demonstrating program successes to Congress, the Office of Management and Budget, and the public. This report lays out a framework for creating and implementing metrics for the CCSP. A general set of metrics provides a starting point for identifying the most important measures, and the principles provide guidance for refining the metrics and avoiding unintended consequences.

The World May Be Doomed?: Can You Help Save Mother Earth? Are You Prepared For A Disaster?, The Nature of Consciousness (The Neurobiology Of Human Life Book 2), Whispering in Gods Ear: True Stories Inspiring Childlike Faith, Life-Span Development: Frameworks, Accounts, and Strategies, Inorganic Chemistry... - Primary Source Edition, Constructive Geometry: Exercises in elementary geometric drawing, prepared under the direction of Earle Raymond Hedrick, Doing Bayesian Data Analysis, Second Edition: A Tutorial with R, JAGS, and Stan, Creation of Database of Heterogeneous systems FT - IR Spectra: IR spectrometry, KBr tablets, ATR accessory, IR spectra database,
